

## Task 2: Quick Visualizations with Custom Bar Charts

- Now that we have imported the data, we are free to use plotly express to explore various facets of the rich data set.
- Plotly Express functions accept tidy Pandas data frames.
- In this task, we will graph the population of Canada by year using a bar plot. In a bar plot, each row of the DataFrame is represented as a rectangular mark.
- We will also customize the bar plot using keyword arguments to color the bars according to the average life expectancy.
